

**Galaxy Pioneers High Technology Table Management System in Macau  
Top Class System To Provide A New Level of Security**

**Feb 16, 2006**

(16 February, 2006 - Macau) Galaxy Casino S.A. ("Galaxy"), a subsidiary of the Galaxy Entertainment Group Limited (stock code: 27), always aims at providing the best entertainment facilities and services to customers. To offer a high level of fair and secure environment, Galaxy has now installed a new table game management system, MPBacc™, at its Waldo Casino. MPBacc™ was developed by renowned US gaming devices and systems manufacturer Bally Gaming and Systems, and is the only system currently in existence with the ability to provide total integration of real time player data at all gaming tables simultaneously. Galaxy has pioneered the introduction of this system in Macau with the aim of providing total security for customers, and is the trend-setter in introducing international security standards to the fast-growing casino industry in Macau.

The MPBacc™ system installed by Galaxy is specially designed for baccarat tables. Its highly accurate optical card recognition technology is capable of preventing game fraud. MPBacc™ effectively supersedes the standard system which monitors one baccarat table only. This system, interfaces with the surveillance and security system, captures the data from all the baccarat tables and enables the management to monitor play and have real time data in an integrated system, and significantly strengthens the security level and elevates operational efficiency. The sophisticated data collected by the system can also be used for marketing research and analysis.

Mr. Ciaran Carruthers, Senior Vice President of City Clubs, Galaxy Casino S.A., said, "Galaxy is the first casino operator in Macau to introduce such a world-class table game management system. We are also the first around the world to use this system at the baccarat tables. Galaxy has worked closely with the supplier from the outset through to the completion of the MPBacc™ system development, with the system operating on the baccarat tables throughout the months of evaluation and testing period. We remain in close contact with the supplier, to further enhance the system by continuous evaluation."

Mr. Carruthers continued, "This advanced-technology system enables us to simultaneously monitor hundreds of baccarat tables and minimizes the pressure placed on the frontline and management teams, while our customers also undoubtedly benefit from playing in a safer and fairer environment. Since Waldo Casino started using this system, we have noticed excellent results, and we will therefore introduce this system at other Galaxy casinos that will open shortly, including the Rio Casino and Grand Waldo Casino. The introduction of the MPBacc™ system

demonstrates Galaxy's commitment to professionalism in making our customers the top priority. We strive to upgrade our services by continuing to bring in the most cutting-edge technology and world-class services, to match with the image of Macau in developing into the best tourism and entertainment hub in Asia."
